against COVID19**

"We are delighted with the new Reme lon air purifiers and the benefits this will bring to the residents for their well-being. They are small, easy to install (simply plug in) and are virtually silent when operating."

Dandi Living

Overview

Client

Dandi Living are a London based housing developer responsible for a pipeline of 2,000 homes in and around London, with plans to build another 15,000 homes in White City, Clapham, Queen's Park and Luton as part of their expansion. Specialising in co-living developments, Dandi Living incorporates innovative space-saving flexible interiors into each 25m² co-living flat.

Challenge

Operating since 1986, Dandi aims to deliver a great physical experience to their tenants. "We really concentrated on the physical aspect of co-living. What you see, feel, smell, it was all part and parcel of Dandi," says Dandi's founder, Ali Ravanshad. As part of this Dandi wanted to include an innovative air purification system that would complement their smart space designs which improve the living experience of tenants, including a bed that rises into the ceiling revealing a skylight, foldaway kitchens and homes designed to provide various modes over the course of a day: sleep, work-study, dine and unwind.

Solution

Dandi has installed over 350 of the small, easy to install, Reme lon air purifiers throughout their buildings - this is the first housing development in the UK to install the innovative devices that will improve the well-being of residents and reduce the risk of airborne and surface viruses such as COVID19 by up to 99%.
